RELEVANT EXPERIENCE

Acuity Insurance | Sheboygan, WI

June 2023 - Present

Software Engineer I - Document Composition

- Led migration of 4 large repositories containing multiple applications to GitLab for a 15-developer engineering team, redesigning branching strategy and CI workflows to improve deployment reliability and collaboration.
- Developed automation for repetitive data processing and application release tasks across development and production environments, reducing manual intervention and improving consistency of software deployments.
- Developed and maintained dynamic document templates within enterprise data pipelines, transforming structured XML and database data into production-ready customer communications.
- Designed and supported ODBC-based database integrations between backend systems and document rendering services, ensuring reliable data retrieval and processing across enterprise applications.
- Engineered and maintained enterprise document generation applications using OpenText Exstream, integrating XML templates and database-driven pipelines to produce customer-facing communications.

Acuity Insurance | Sheboygan, WI

February 2020 - June 2023

Technical Support Analyst - Intern

- Managed asset tracking and lifecycle processes for 1,000+ enterprise devices, maintaining accurate inventory data and supporting hardware deployment and retirement workflows.
- Collaborated within Agile/Scrum teams to deliver technical solutions aligned with business requirements.
- Developed automation scripts in PowerShell, Batch, and Python to streamline system configuration, deployment, and reporting tasks.
- Leveraged SCCM to deploy standardized system images and enforce configuration policies.

PROJECTS

Homelab | Personal Project

Oct. 2025 - Present

- Built Infrastructure-as-Code automation using **Ansible** to provision services, configure security policies, and manage certificate deployment across a multi-node environment.
- Designed and deployed a distributed Linux infrastructure using **Proxmox VE, LXC containers, and Docker**, providing hands-on experience with virtualization, containerization, and service orchestration.
- Developed automation workflows using **Java, Python, SQL, and PostgreSQL** to support service provisioning, log ingestion, and system monitoring.

MediaFlow | Personal Project

June 2026

- Designed and implemented an automated **Java** media processing system that detects, standardizes, and re-encodes video files on a NAS using **FFmpeg**, eliminating manual media optimization workflows.
- Built modular file-scanning and processing pipelines to support scalable batch processing across large media libraries.
- Integrated external processes and file-system operations with structured error handling to support reliable, long-running background jobs.
- Structured the application using object-oriented design principles and a **Maven**-based build architecture.

TECHNICAL SKILLS

Languages: Java, Python, Javascript (Typescript, React), Bash & Powershell, HTML / CSS.

Frameworks & Libraries: React, Node.js, Pandas, NumPy

Databases: Postgres, Microsoft SQL Server, MongoDB, DB2

Tools and Infrastructure: Maven, Gradle, Docker, Git, Ansible, Nginx, Terraform, Tailwind CSS, npm, Typescript

EDUCATION

Lakeland University | Plymouth, WI

May 2023

B.S. in Computer Science, Focus on Software Development | GPA: 3.8/4.0

- **Relevant Courses:** Data Structures & Algorithms, Data management & Warehousing, OOP Programming 1 & 2, Artificial Intelligence, Computer Architecture, System Analysis and Design, Advanced Programming, Data Warehousing.

Lakeshore Technical College | Cleveland, WI

May 2021

A.S. in IT Networking | GPA: 3.8/4.0

- **Relevant Courses:** Networking 1-4, Network Security, Server Administration 1 & 2, Linux, Network Design and Documentation, Network Security
